

Privacy Policy — Fill Window

Last updated: August 2026

Fill Window ("the app", "the extension") is developed by Liam Taylor ("we", "us"). This policy explains what data the app collects — which is none.

Summary

Fill Window does not collect, store, transmit, or share any personal data, browsing history, or page content, from you or anyone else. There are no accounts, no analytics, no crash reporting services, and no third-party tracking of any kind built into the app.

What the extension actually does

Fill Window is a Safari extension that detects `<video>` elements on the webpage you're currently viewing and resizes that video to fill the browser window, when you choose to activate it via the toolbar, a keyboard shortcut, or an on-page button. While active, it can also offer quality switching on specific supported sites, a zoomable/scrubbable view, and a preview of the video frame at a given timestamp on the seek bar. All of this happens locally, inside your browser, on your device. Nothing about the page you're viewing, the video you're watching, or your activity is sent anywhere — not to us, not to any third party.

Why the extension requests broad website access

Safari requires the extension to request permission to run on websites in order to detect video elements on whatever page you're currently viewing — since videos can appear on any website, not just a fixed list of them. This permission is used solely to locate, resize, and control playback of video elements on the active page. The extension does not read, log, collect, or transmit the content of any page you visit.

Other permissions the extension uses

- **Storage** — your preferences (such as where the on-page button appears, and how long the controls stay visible) are saved locally on your device using Safari's standard extension storage. This data never leaves your device and is never transmitted anywhere, including to us.
- **Scripting** — on a small, explicit list of supported sites (currently just YouTube), the extension can run a short script in the page to check for and switch between available video quality levels. This only reads and changes playback settings already exposed by that site's own video player — it does not collect or transmit any data, and has no effect on any other site.

Data collection

We do not collect:

- Personal information (name, email, location, etc.)
- Browsing history
- Page content or video content
- Analytics or usage statistics
- Device identifiers
- Any other data of any kind

Any video thumbnails shown when choosing between multiple videos on a page are generated locally on your device and are never saved, transmitted, or stored anywhere, including outside the current browsing session.

In-App Purchases

Fill Window includes an entirely optional tip feature, accessible from the companion app window. Tips are processed through Apple's In-App Purchase system — we never see or handle your payment details, and Apple's own privacy policy governs that transaction, not ours. No purchase is required to use any feature of the extension.

Children's privacy

Since the app collects no data of any kind from anyone, this applies equally to users of any age.

Changes to this policy

If this policy changes in the future — for example, if a future version of the app adds a feature that involves data of some kind — this page will be updated accordingly, and the "Last updated" date above will reflect that change.
