

Privacy Policy — Credits

Last updated: 3 September 2026

Credits ("the App") is developed by Liam Taylor, trading as LPT Studio ("I", "me", "my"). This policy explains what information Credits handles, how it's stored, and what choices you have. I've written it to match exactly what the App actually does — not a generic template.

The short version

Credits doesn't have accounts, doesn't track you, and doesn't run ads or analytics. Everything you log — your ratings, notes, watch history — is stored on your own device and synced privately across your own devices via your personal iCloud account. I never see it. The only outside service Credits talks to is The Movie Database (TMDB), to fetch film and TV information like titles, posters, and cast details.

Information I do not collect

Credits does not require you to create an account, sign in, or provide your name, email address, or any other identifying information to me. I do not use advertising identifiers, analytics SDKs, or third-party tracking of any kind. Because Credits does not track you across apps or websites, it does not show an App Tracking Transparency prompt — there's nothing to ask permission for.

Information you provide

When you use Credits, you may choose to enter:

- Films and TV shows you've watched or want to watch
- Ratings, written notes, and favourite markings
- Who you watched something with, and where
- A profile photo, if you choose to add one
- Which streaming services you subscribe to (for your own reference within the app)

All of this is content you create voluntarily. Credits doesn't require any of it beyond the basic act of logging a title.

Where your data is stored

Your data is stored locally on your device, and synced across your own devices using Apple's CloudKit, under your personal iCloud account. This sync is private to you — it uses Apple's private database, which means Apple's infrastructure carries the data, but I have no access to it, no copy of it, and no ability to view it. I don't operate a server that stores your personal data.

If you're signed out of iCloud, or have iCloud sync disabled for Credits in your device's Settings, your data stays local to that one device only.

Third-party services

Credits uses **The Movie Database (TMDB)** to look up film and TV information — titles, posters, cast and crew, genres, and similar metadata. When you search for a title or view its details, that search request is sent to TMDB's servers to retrieve results. I recommend reviewing [TMDB's own privacy policy](#) for details on how they handle requests made to their API. This app uses the TMDB API but is not endorsed or certified by TMDB.

Credits does not use any other third-party services, SDKs, or data processors.

Data export and deletion

You can export a full backup of your Credits data at any time from Settings, as a file you control. This is intended for personal backup and portability — it isn't a way of transferring an "account," since there isn't one.

To delete your data, you can:

- Delete individual entries within the app, or
- Delete the app itself, which removes all local data from that device, or
- Manage or delete Credits' iCloud data via your device's Settings app (Settings → [your name] → iCloud → Manage Account Storage)

Because I never hold a copy of your data myself, there's no separate deletion request to send — removing it from your device and iCloud account removes it entirely.

Children's privacy

Credits is not directed at children, and I do not knowingly collect personal information from children. If you believe a child has provided personal information through the App, please contact me using the details below.

Changes to this policy

If this policy changes — for example, if a future version of Credits adds a feature that changes how data is handled, such as an optional social feature — I'll update this document and revise the date at the top. I won't retroactively expand how your existing data is used without making that clear.

Contact

If you have questions about this policy or how Credits handles data, contact me at:
